

# 2014 Consumer Confidence Report

Water System Name: NORTH TRAILS MUTUAL WATER CO

Report Date: June 2015

*We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2014.*

**Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.**

**Type of water source(s) in use:** According to CDPH records, the Sources are Groundwater. The Assessments were done using the Default Groundwater System Method.

**Your water comes from 4 source(s):** 11540 Durango Lane, Well 07, Well 08 - Pending and Well 09

**Opportunities for public participation in decisions that affect drinking water quality:** Regularly-scheduled water board or city/county council meetings are held annually, fliers are sent out announcing the location, date, and time.

For more information about this report, or any questions relating to your drinking water, please call 661-268-8125 and ask for Mark Whatley.

## TERMS USED IN THIS REPORT

**Maximum Contaminant Level (MCL):** The highest level of contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

**Maximum Contaminant Level Goal (MCLG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

**Public Health Goal (PHG):** The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

**Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG):** The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Primary Drinking Water Standards (PDWS):** MCLs and MRDLs for the contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

**Secondary Drinking Water Standards (SDWS):** MCLs for the contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

**Treatment Technique (TT):** A required process intended to reduce the level of a contaminant in drinking water.

**Regulatory Action Level (AL):** The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**ND:** not detectable at testing limit

**ppm:** parts per million or milligrams per liter (mg/L)

**ppb:** parts per billion or micrograms per liter (µg/L)

**pCi/L:** picocuries per liter (a measure of radiation)

**The sources of drinking water:** (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

**Contaminants that may be present in source water include:**

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- *Organic chemical contaminants*, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- *Radioactive contaminants*, that can be naturally-occurring or be the result of oil and gas production and mining activities.

**In order to ensure that tap water is safe to drink**, the USEPA and the California Department of Public Health (Department) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Department regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

**Tables 1, 2, 3, 4 and 5 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent.** The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The Department allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

**Table 1 - SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER**

Lead and Copper (complete if lead or copper detected in last sample set)	Sample Date	90th percentile level detected	No. Sites Exceeding AL	AL	PHG	Typical Sources of Contaminant
Copper (ppm)	10 (2014)	0.04	0	1.3	.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

**Table 2 - SAMPLING RESULTS FOR SODIUM AND HARDNESS**

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Sources of Contaminant
Sodium (ppm)	(2011)	60	N/A	none	none	Salt present in the water and is generally naturally occurring
Hardness (ppm)	(2011)	242	N/A	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring

Any violation of MCL, AL or MRDL is highlighted. Additional information regarding the violation is provided later in this report.

**Table 3 - DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD**

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Sources of Contaminant
Aluminum (ppm)	(2011)	0.95	ND - 1.90	1	0.6	Erosion of natural deposits; residue from some surface water treatment processes
Fluoride (ppm)	(2011)	0.3	N/A	2	1	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories.

Nitrate (ppm)	(2014)	7.8	ND - 17.7	45	45	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Nitrate + Nitrite as N (ppm)	(2011)	5.2	N/A	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Gross Alpha (pCi/L)	(2014)	4.729	ND - 13.9	15	(0)	Erosion of natural deposits.
Uranium (pCi/L)	(2014)	4.19	ND - 10.9	20	0.43	Erosion of natural deposits
Toluene (ppb)	(2011)	0.6	N/A	150	150	Discharge from petroleum and chemical factories; underground gas tank leaks

**Table 4 - DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD**

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Sources of Contaminant
Chloride (ppm)	(2011)	90	N/A	500	n/a	Runoff/leaching from natural deposits; seawater influence
Iron (ppb)	(2011)	850	N/A	300	n/a	Leaching from natural deposits; Industrial wastes
Manganese (ppb)	(2011)	20	N/A	50	n/a	Leaching from natural deposits
Specific Conductance (umhos/cm)	(2011)	730	N/A	1600	n/a	Substances that form ions when in water; seawater influence
Sulfate (ppm)	(2011)	33	N/A	500	n/a	Runoff/leaching from natural deposits; industrial wastes
Total Dissolved Solids (ppm)	(2011)	380	N/A	1000	n/a	Runoff/leaching from natural deposits
Turbidity (NTU)	(2011)	0.6	N/A	5	n/a	Soil runoff

Any violation of MCL, AL or MRDL is highlighted. Additional information regarding the violation is provided later in this report.

**Table 5 - DETECTION OF UNREGULATED CONTAMINANTS**

Chemical or Constituent (and reporting units)	Sample Date	Level Detected	Range of Detections	Notification Level	Typical Sources of Contaminant
Boron (ppm)	(2011)	0.1	N/A	1	The babies of some pregnant women who drink water containing boron in excess of the notification level may have an increased risk of developmental effects, based on studies in laboratory animals.

## Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with the service lines and home plumbing. *North Trails Mutual Water Co.* is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When

your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

## Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

**About our Aluminum:** Some people who drink water containing aluminum in excess of the MCL over many years may experience short-term gastrointestinal tract effects.

**About our Iron:** Iron was found at levels that exceed the secondary MCL. The Iron MCL was set to protect you against unpleasant aesthetic affects such as color, taste, odor and the staining of plumbing fixtures (e.g., tubs and sinks), and clothing while washing. Violating this MCL does not pose a risk to public health.

## 2014 Consumer Confidence Report Drinking Water Assessment Information

### Assessment Information

A source water assessment was conducted for the WELL 06 and WELL 07 of the NORTH TRAILS MUTUAL WATER CO water system in April, 2002. A source water assessment was conducted for the WELL 08 of the NORTH TRAILS MUTUAL WATER CO water system in August, 2004. The source WELL 09 of the NORTH TRAILS MUTUAL WATER CO is located only 10 feet from WELL 06, therefore is subject to the same activities. The 11540 DURANGO LANE of the NORTH TRAILS MUTUAL WATER CO is a central meeting point of the water from each well therefore does not require an assessment.

11540 Durango Lane - is a central meeting point of the water from each well.

- |                   |  |
|-------------------|--|
| Well 07           | - is considered most vulnerable to the following activities not associated with any detected contaminants:<br>Grazing [> 5 large animals or equivalent per acre]<br>Septic systems - low density [<1/acre]         |
| Well 08 - Pending | - is considered most vulnerable to the following activities not associated with any detected contaminants:<br>Grazing [> 5 large animals or equivalent per acre]<br>Septic systems - low density [<1/acre]         |
| Well 09           | - is considered most vulnerable to the following Well 06 activities not associated with any detected contaminants:<br>Grazing [> 5 large animals or equivalent per acre]<br>Septic systems - low density [<1/acre] |

### Discussion of Vulnerability

WELLS 06, 07, 09: This water system draws from 4 - 5 wells and the water delivered from this system is know to have elevated nitrate levels - over half the MCL of 45 ppm. this water system is currently water from other wells to assure that the water it delivers is below the MCL. Los Angeles County Environmental Health currently oversees this system and conducts the required monitoring tests. Please note that although Well 06 is dry the Assessment info has been included in this report as a reference for Well 09, as WELL 09 is subject to the same Possible Contaminating Activity (PCE) as WELL 06 and uses the same source water assessment.

WELL 08: This water system draws from 2 wells. The water delivered is known to have elevated nitrate and uranium levels, over half of respective MCLs. In addition, three standby wells have high uranium ranging from 211 to 285 pCi/L. Los Angeles County Environmental Health currently oversees this water system and conducted the required monitoring. There have been no contaminants detected in the water supply, however the source is still considered vulnerable to activities located near the drinking water source.

**Acquiring Information**

A copy of the complete WELL06/WELL09 and WELL07 assessment may be viewed at:

Los Angeles County Environmental Health  
2525 Corporate Pl. Room 150  
Monterey Park, CA 91754

A copy of the complete WELL 08 assessment may be viewed at:

Los Angeles County Environmental Health  
5050 Commerce Drive  
Baldwin Park, CA 91706-1423

You may request a summary of the complete WELL06/WELL09 and WELL07 assessments be sent to you by contacting:

Russ Johnson  
Chief Environmental Health Specialist  
(323) 881-4147  
(323) 269-4327 (fax)

You may request a summary of the WELL 08 assessment be sent to you by contacting:

Patrick Nejadian  
Chief, Environmental Health Specialist  
(626)430-5380  
(626)813-3016 (fax)
